Choose your DSAR package

To help manage your DSAR requirements, we have brought together the right people and technology to deliver an efficient end-to-end DSAR solution. Be it a one off DSAR case or multiple cases per year, we offer three different DSAR package options to meet the needs of every organization:

What we offer?	Ad hoc Suitable for one off DSARs	Medium Term Suitable for multiple DSARs per year	Long Term Suitable for taking control of your own DSAR Platform
Review Software To securely preserve, view, search and review your data	✓	✓	✓
Helpdesk Support Delivered by BSI Consultants	✓	✓	✓
User accounts For your legal team & clients to access the software platform	✓	✓	✓
Handover of Data Simple and cost-effective handover of data files including full redaction functionality	✓	✓	✓
Training Support For navigating and reviewing documents in the software platform	✓	✓	✓
Repository Storage Space Workflow* Workflow which reduces costs by limiting the amount of data to be imported into the review software platform	✓ (grey)	✓	✓
Branching Out When you have a data source that may be common to multiple DSARs, take advantage of the ability to branch out multiple sub platforms from a single storage area	✓ (grey)	✓	✓
Client Domain** Providing the client with their own platform, giving more control and independence to manage their own DSAR requests with the support of BSI consultants	✓ (grey)	✓ (grey)	✓
Advanced Training Tailored to the needs and workflow creation for administrators and end users	✓ (grey)	✓ (grey)	✓

*Repository Storage Spaces act as holding areas for larger volumes of data. With more limited functionality, Repository Workspaces are used to minimise the amount of data to be promoted to the review workspace. These workspaces are charged at a lower rate to ease large volumes of data.

** Client Domain Subscriptions include the onboarding and support of the BSI eDiscovery team to assist in creating their customised workspace templates and allow Domain Administrators to become comfortable in carrying out common administrative tasks such as: customizing permissions, creating workspaces, managing users, data processing, document imaging and final productions.
